Young readers will explore which modes of transportation move people and which ones move goods and provide services.

*Brick x Brick* No Starch Press

Today's business leaders operate in an increasingly harsh environment. Uncertainty in the economy causes paralysis. Quarterly goals drive short-term and shortsighted decisions. Workforce mobility kills loyalty. Iconic products decline as fast as start-ups create new categories. And the pressure to do more with less, combined with the multiplicity of available marketing tools and technology, can be overwhelming. Now more than ever, brands and the people who lead them need clarity and guidance. The good news is that people have found ways to thrive in harsh environments for millennia. Author Jonathan David Lewis, combining the lessons of group survival dynamics with more than a decade of proprietary research into the factors that cause companies to lose their way, shows leaders how to thrive in unforgiving business environments by learning to: Focus on navigating risk instead of trying to measure or reduce it. Cultivate your brand's will to live by staying positive and asking the most important question: Are you worth it? Read the brand signs by observing the market, keeping an eye on performance measures, engaging your team, and listening to your gut. Develop a concept of "mission" to ensure internal alignment and reduce friction. Act with urgency rather than waiting for the right circumstance. Brand vs. Wild helps readers understand the wilderness in which they find their companies and identify the specific steps they must take to thrive in the Brand Wilderness. There is hope in a harsh business world. And Brand vs. Wild is it.

The articles in this special issue form three overlapping themes: papers concerned with language development, other aspects of cognition, and interpersonal relations and personality. The papers provide strong evidence of the importance of the study of individuals with neurodevelopmental genetic disorders for enhancing the understanding of the complex manner in which initial genetic differences impact on both behavior (performance) and processing strategies from infancy through adulthood. Much work remains to be done, not only from a psychological or a biological perspective but, most importantly, from an integrated psychological-biological perspective. The hope is that these articles will motivate future studies informed by the genetic-developmental approach both on Williams syndrome and on other neurodevelopmental genetic disorders.
