Surveying, 6th Edition Lulu Press, Inc

Modern Surveying is unimaginable without the use of electronic equipment and information technology. Surveying with conventional systems has been completely replaced with advanced automated systems. Total Station, Global Positioning System (GPS), Remote Sensing and Geographical Information System (GIS) have all become an inextricable part of surveying. Advanced Surveying: Total Station, GIS and Remote Sensing provides a thorough working knowledge of these technologies.

This is a book about boundary surveying. It is one of a two part series which also includes "Land Surveying Mathematics Simplified". This book is written for anyone who is interested in how surveys are performed. The book would also be useful for land surveying students who are interested in developing an overall view of how land surveyors go about surveying a parcel of land. This book will provide the reader with a background on boundary surveying techniques and some of the common legal issues which govern boundary establishment. The information in this book will be useful to home owners, real estate agents, attorneys, engineers, city planners, building officials, students, bankers, title researchers, GIS practitioners and others. I hope this book will be an important resource for those who have questions relating to boundaries and land surveying in general. There is an enlarged second edition of this book now available.

Willis's Elements of Quantity Surveying Walter de Gruyter

The book gives a detailed theoretical background of the constructional principles of instruments necessary for the most

general tasks of surveying. Undergraduate and graduate students will find it very useful in surveying studies to get acquainted with the broad variety of instruments, both classical and new ones. At the same time, specialists in surveying will also find the book full of new material. The book contains about 600 pictures, including photographs and detailed descriptions of the most representative types of instrumentation. Older types of instruments already out of use, or used only occasionally, are described in broad outline, mentioning basic principles, methods of testing and possibilities for their modernization. New categories of instruments, such as gyroscopes, compensation levelling instruments, electronic theodolites, distance meters and tacheometers, are dealt with in more detail. Care has been taken to include the automation which is rapidly spreading in all fields of instrument manufacture, being necessary to reduce manual operations. The book is intended for builders, architects, technicians, teachers of surveying and professional manufacturers.
