The second edition of

this very well-received book, which in its first edition was entitled *Postharvest Technology of Fruits and Vegetables*, has been welcomed by the community of postharvest physiologists and technologists who found the first edition of such great use. The book covers, in comprehensive detail, postharvest physiology as it applies to postharvest quality, technology relating to maturity determination, harvesting, packaging, postharvest treatments, controlled atmosphere storage, ripening and transportation on a very wide international range of fruits and vegetables. The new edition of this definitive work, which

contains many full colour photographs, provides key practical and commercially-oriented information of great use in helping to ensure that fruit and vegetables reach the retailer in optimum condition, with the minimum of loss and spoilage. *Fruits and Vegetables*, 2nd edition is essential reading for fruit and vegetable technologists, food scientists and food technologists, agricultural scientists, commercial growers, shippers and warehousing operatives and personnel within packaging companies. Researchers and upper level students in food science, food technology, plant and agricultural sciences will find a great deal of

use within this landmark book. All libraries in research establishments and universities where these subjects are studied and taught should have copies readily available for users. A. K. Thompson was formerly Professor and head of Postharvest Technology, Silsoe College, UK.

Meyler's Side Effects of Herbal Medicines, named to Doody's Core Titles for 2013, is a derivative work based on the acclaimed Meyler's Side Effect of Drugs, Fifteenth Edition. This book summarizes the adverse effects of a large range of herbal medicines and the active ingredients that they contain. It includes extensive lists

of the families of plants that are used as herbal medicines, including the Latin names of genera and species as well as the common names of individual plants. It features not only herbal medicines but information on important compounds such as tropane alkaloids, cardiac glycosides, nicotine, and pyrolizidine alkaloids. The book is divided into three separate sections: Family - Each monograph is organized under a family of plants (for example, Liliaceae) Genera - The various genera that are included under the family name are tabulated (for example, the family Liliaceae contains 94 genera) Species - In each monograph, some

species are dealt with separately (for example, in Liliaceae, four species are included under their Latin names and major common names) Each monograph includes the following information:

- Alternative common names
- Active ingredients
- Uses – both traditional and modern
- Adverse effects
- References
- Drug names are designated by their recommended or proposed International Non-proprietary Names (rINN or pINN); when those are not available, clinical names or brand names are used. The material is drawn from the fifteenth edition of the internationally renowned encyclopedia, Meyler's Side Effects of Drugs, and the latest volumes

in the companion series, Side Effects of Drugs Annuals. This volume is critical for any health professional or homeopathic practitioner with an interest in herbal medicines. Named to Doody's Core Titles 2013, a collection development tool for health sciences libraries of all sizes, by Doody Enterprises Surpasses the Physician's Desk Reference © by including clinical case studies and independent expert analysis Complete index of drug names Most complete cross referencing of drug-drug interactions available

LogiQL Morgan Kaufmann

LogiQL is a new state-of-the-art programming language based on Datalog. It can be used to build applications that combine transactional, analytical, graph, probabilistic, and mathematical programming. LogiQL makes it possible to build hybrid applications that previously required multiple programming languages and databases. In this first book to cover LogiQL, the authors explain how to design, implement, and query deductive databases using this new programming language. LogiQL's

declarative approach enables complex data structures and business rules to be simply specified and then automatically executed. It is especially suited to business applications requiring complex rules to be implemented efficiently, for example predictive analytics and supply chain optimization. Suitable for both novices and experienced developers, the book is written in easy-to-understand language. It includes many examples and exercises throughout to illustrate the main concepts and consolidate understanding.

Post-COVID-19 BoD - Books on Demand

This book contains the summaries of the "Innovation in Pharmacy: Advances and Perspectives" that took place in Salamanca (Spain) in September 2018. The early science of chemistry and microbiology were the source of most drugs until the revolution of genetic engineering in the mid 1970s. Then biotechnology made available novel protein agents such as interferons, blood factors and monoclonal antibodies that have changed the modern pharmacy. Over the past year, a new pharmacy of oligonucleotides has emerged from the science of gene expression such as RNA splicing and RNA interference. The ability to design

therapeutic agents from genomic sequences will transform treatment for many diseases. The science that created this advance and its future promise will be discussed. Phillip Allen Sharp is an American geneticist and molecular biologist who co-discovered RNA splicing. He shared the 1993 Nobel Prize in Physiology or Medicine with Richard J. Roberts for "the discovery that genes in eukaryotes are not contiguous strings but contain introns, and that the splicing of messenger RNA to delete those introns can occur in different ways, yielding different proteins from the same DNA sequence. He works in Institute Professor Koch Institute for Integrative Cancer

Research, Massachusetts Institute of Technology (MIT), Cambridge, MA, US. Este libro recoge los resúmenes de la «Innovation in Pharmacy: Advances and Perspectives» que tuvo lugar en Salamanca (España) en septiembre de 2018. La ciencia primitiva de la química y la microbiología fue la fuente de la mayoría de las drogas hasta la revolución de la ingeniería genética a mediados de la década de 1970. Luego, la biotecnología puso a disposición agentes proteínicos novedosos como interferones, factores sanguíneos y anticuerpos monoclonales que han cambiado la farmacia moderna. Durante el año pasado, surgió una nueva farmacia de

oligonucleótidos a partir de la ciencia de la expresión génica, como el empalme de ARN y la interferencia de ARN. La capacidad de diseñar agentes terapéuticos a partir de secuencias genómicas transformará el tratamiento de muchas enfermedades. La ciencia que creó este avance y su promesa futura será discutida. Phillip Allen Sharp es un genetista y biólogo molecular estadounidense que co-descubrió el empalme de ARN. Compartió el Premio Nobel de 1993 en Fisiología o Medicina con Richard J. Roberts por "el descubrimiento de que los genes en eucariotas no son cadenas contiguas, sino que contienen intrones, y que el empalme del ARN

mensajero para eliminar esos intrones puede ocurrir de diferentes maneras, produciendo diferentes proteínas de la misma secuencia de ADN.

The sensory properties of foods are the most

important reason people eat the foods they eat. What those properties are and how we best measure those properties are critical to understanding food and eating behavior. Appearance, flavor, texture, and even the sounds of food can impart a desire to eat or cause us to dismiss the food as unappetizing, stale, or even inappropriate from a cultural standpoint. This Special Issue focuses on how sensory properties are measured, the specific sensory properties of various foods, and consumer behavior related to which properties might be most important in certain situations and how consumers use sensory attributes to make decisions about

what they will eat. This Special Issue contains both research papers and review articles.

A comprehensive and easy-to-follow guide to good practice in extemporaneous compounding. It incorporates the key findings and outputs from the UK National Advisory Board study, including advice on purchasing unlicensed medicines. It will be adopted as the standard for extemporaneous dispensing for NHS patients. Although the standards set out in this book are primarily written for implementation in NHS hospitals, the principles should be equally applied across the profession

internationally. Written in two parts, this book provides: standards for extemporaneous dispensing stability summaries for the 50 most commonly prepared extemporaneously prepared medicines in NHS hospitals. Compounding of pharmaceutical formulations remains a core skill of pharmacists and is taught at undergraduate level. Written by experts in the field with input from the UK NHS Pharmaceutical Quality Assurance Committee, this book will be an invaluable reference for any clinical or procurement pharmacist, pharmacy technician or student involved with extemporaneous preparation.
